

Surface Studio Website Plan & React Component Structure

Website Structure & Page Breakdown

1. Home Page (/)

Purpose: Primary landing page to capture attention and explain the hybrid agency model.

Content Sections:

Hero Section: Large, bold headline ("Building Digital Foundations & Visual Stories"), sub-headline, strong CTA ("Start Your Project"), and founder credit (Kgosi Amani).

The Hybrid Model: Visual explainer of the "Agency + Artistic Brand" fusion.

Core Services Overview: Icon-based preview of the four key services (Web Dev, Graphic Design, Social Media, Videography) with "Learn More" links.

Featured Portfolio Preview: A highlight reel or grid of 2-3 best website projects.

Trust Signal: A powerful, concise client testimonial.

Final CTA: Repeating the main call-to-action.

2. About Page (/about)

Purpose: Builds personal connection and trust by telling the founder's story and agency ethos.

Content Sections:

Our Story & Philosophy: Narrative about Kgosi Amani and the "why" behind Surface Studio.

The Vision: Connection to the 20-year plan and the hybrid model.

Our Values: Bullet points or short descriptions of core ethics (Transparency, Authentic Collaboration, etc.).

The Process: A high-level, 4-step graphic of the typical client workflow (Discover, Strategize, Create, Launch).

Contract Download: A clear section with a styled button to download the service agreement (PDF). Text: "Committed to clarity. Review our standard contract here."

3. Services Page (/services)

Purpose: The main conversion page to detail offerings and pricing, structured around your phased plan.

Content Sections:

Page Introduction: Briefly states the importance of a cohesive digital strategy.

Service Tiers: A dedicated, visually distinct section for each of the four services. Each section must include:

Service Importance: A short copy on "Why This Matters."

Phase Status Badge: A prominent tag (e.g., "AVAILABLE NOW", "COMING SOON [Q1]", "FUTURE PHASE").

Pricing Packages: Display the 3-5 tier packages for that service (using the pricing plans we created). Each package card should show: Tier Name, Price, Key Inclusions, and a CTA ("Book This" / "Notify Me" / "Learn More").

Detailed Description: Expandable text or a list of what the service entails.

4. Portfolio Page (/portfolio)

Purpose: Provides social proof and showcases tangible results.

Content Sections:

Filter/Grid Introduction: "See the work that brings brands to life."

Project Cards: A grid of at least 3 cards for websites you've built.

Each Card Contains: Project thumbnail, client/project name, a one-line description, tech/tools used (e.g., React, Webflow), and a "View Live Site" button that opens the site in a new tab.

(Future Expansion: Can later add filters for different service types like "Graphic Design" or "Video").

5. Contact Page (/contact)

Purpose: A unique, engaging gateway for client inquiries, mirroring social familiarity.

Content Sections:

Instagram Interface Mimic:

A styled component that looks like an Instagram profile.

Displays your agency's Instagram profile picture, handle (@sunface.studios), and bio snippet.

Two Functional Buttons:

"Follow" Button: Links directly to your Instagram profile page.

"Message" Button: Links directly to your Instagram Direct Message thread.

Direct Contact Form:

A simple form with fields: Name, Email, Subject, Message.

Submit Button Logic: On click, it should open WhatsApp (via [https://wa.me/27\[YourNumber\]](https://wa.me/27[YourNumber])) with a pre-filled message that includes the form subject and the user's message input.

Alternative Contact: Clearly listed email address.

React Component Structure

Organize your src/components/ folder with these reusable pieces:

A. Layout & Global Components

Header.jsx / Navigation.jsx: Contains the logo and main site navigation menu.

Footer.jsx: Contains copyright, social media links, and secondary navigation.

Layout.jsx: Wraps around page content and includes the Header and Footer.

B. Home Page Components

Hero.jsx: The full-width introductory banner with headline and CTA.

ServicePreview.jsx: A grid component to display the 4 core service icons and teasers.

PortfolioPreview.jsx: A carousel or grid to showcase the featured project cards.

TestimonialCard.jsx: A styled component to display a client quote.

C. Services Page Components

ServiceSection.jsx: The main container for each service (Web Dev, Design, etc.).

PhaseBadge.jsx: A dynamic component that changes style (color, text) based on a phase prop (e.g., phase="available").

PricingCard.jsx: A reusable card component to display each package tier. Accepts props like title, price, features[], isAvailable, and ctaText.

D. Portfolio Page Components

ProjectCard.jsx: A card to display each portfolio project. Accepts props like image, title, description, techStack[], and liveUrl.

E. Contact Page Components

InstagramProfile.jsx: The styled component that mimics the Instagram UI with the "Follow" and "Message" buttons.

WhatsAppForm.jsx: The contact form that captures user input and handles the WhatsApp redirect logic on submission.

F. Shared / UI Components

Button.jsx: A versatile button component accepting variants (e.g., primary, outline, gradient).

SectionHeader.jsx: A consistent component for page section titles and subtitles.

Example Page Composition

Here's how you would assemble the Services Page using these components:

```
jsx
// ServicesPage.jsx
import Layout from '../components/Layout';
import ServiceSection from '../components/ServiceSection';
import { webDevPackages, designPackages } from '../data/pricingData'; // Your pricing data

function ServicesPage() {
  return (
    <Layout>
      <h1>Our Services</h1>
      <p>Introduction text here...</p>

      <ServiceSection
        title="Web Development"
        phase="available"
        description="Why web dev is important..."
```

```

    packages={webDevPackages} // Pass the array of package objects
  />

  <ServiceSection
    title="Graphic Design"
    phase="coming-soon"
    description="Why design is important..."
    packages={designPackages}
  />

  { /* ... Repeat for Social Media & Videography */ }
</Layout>

);
}

```

This structure provides a clear, modular, and scalable blueprint for building your website that aligns perfectly with your business plan and phased service rollout.

Overall Design Style

Editorial. Bold. Concept-driven minimalism.

The visuals feel like a **modern creative studio manifesto**—less about selling services directly, more about *positioning identity, philosophy, and story*.

It sits at the intersection of:

- **Editorial design**
- **Creative studio portfolios**
- **Brand storytelling websites**

Think *design agency meets art publication*.

Visual Language

1. Color System

- **Primary palette:**
 - Strong **red–orange gradients** (warm, energetic, confident)
 - Clean **off-white / white backgrounds**
 - Deep **black accents** for contrast and grounding
- **Usage philosophy:**
 - Color is used **intentionally**, not everywhere
 - Large color blocks act as **emotional anchors**, not decoration
 - White space is respected and prominent

👉 On a website, this translates to:

- High-contrast hero sections
 - Color-blocked panels separating sections
 - Minimal background noise
-

2. Typography Style

Typography is the main visual weapon.

- Large, bold, sans-serif headlines
- Sentence-style headlines (not marketing buzzwords)
- Text feels **spoken**, reflective, and human
- Short phrases > long paragraphs

Examples of tone:

- “This isn’t just a service”
- “The idea that won’t leave you alone”
- “My corner of the internet now has a front door”

👉 On a website:

- Oversized hero text
- Editorial paragraph spacing

- Headlines that read like thoughts, not slogans
 - Clear typographic hierarchy:
 - Hero statement
 - Supporting sentence
 - Small contextual caption
-

Layout & Composition

3. Grid & Structure

- **Modular card-based layouts**
- Strong rectangular containers
- Content lives inside clearly defined blocks
- Feels *assembled*, not fluid

There's a deliberate sense of:

- Panels
- Sections
- Frames

👉 Website translation:

- Modular sections stacked vertically
 - Card-like content areas
 - Clear separation between ideas
 - Minimal scrolling confusion
-

4. Asymmetry & Negative Space

- Layouts are **intentionally off-center**
- Text blocks don't always align perfectly
- Large areas of negative space

This gives:

- Editorial confidence

- Creative restraint
- “We know what we’re doing” energy

👉 On web:

- Asymmetric hero layouts
 - Text offset from images
 - Controlled imbalance for visual interest
-

Imagery & Media

5. Image Treatment

- Real spaces, real work, behind-the-scenes visuals
- Workshop / studio / process imagery
- Often muted or black-and-white
- Images feel *documentary*, not stock

👉 Website use:

- Studio photos > polished mockups
 - Process shots > final renders
 - Images as context, not decoration
-

Graphic Elements

6. Graphic Motifs

Recurring visual cues:

- Starburst or stamp-like icons
- Rounded rectangles
- Quote-style shapes
- Simple arrows and indicators

They feel:

- Hand-placed
- Editorial

- Slightly playful but controlled

👉 On web:

- Use small graphic accents sparingly
- Icons that feel branded, not generic
- Repetition for identity consistency

Brand Personality Communicated

This design style communicates:

- **Intentionality**
- **Confidence without loudness**
- **Creative maturity**
- **Story over sales**
- **Studio > agency > service provider**

It says:

“We don’t chase trends. We build ideas.”

How This Becomes a Website Experience

If translated properly into a website, the experience would feel like:

- **A front door to a creative studio**
- A scrolling narrative, not a landing page
- Each section reads like a chapter
- Minimal CTAs, but powerful positioning
- Instagram posts become *sections*, not just visuals

Summary (One-Line Style Definition)

A bold, editorial, story-first creative studio design style built on strong typography, intentional color blocks, modular layouts, and human-sounding brand language.
